

COVID-19 VACCINE SAFETY

What you need to know and how you can help

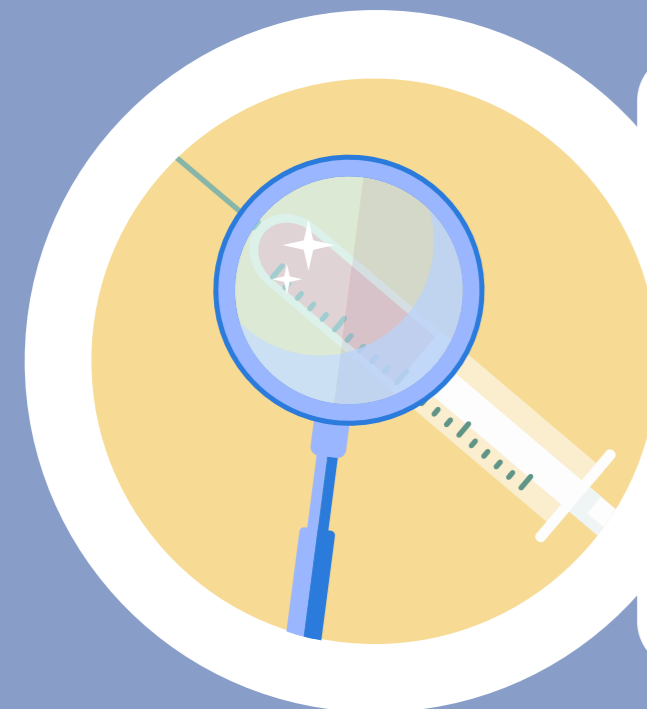

Most adverse reactions from vaccines are mild to moderate and of limited duration

Common side effects after COVID-19 vaccines are injection site pain, fever, headache and fatigue.

Record the name of the vaccine, the manufacturer and batch number

If you experience an adverse event, you will be able to provide a more complete report to the relevant authorities.

Vaccine safety is extensively monitored

The safety of vaccines is extensively monitored by regulators and vaccine manufacturers.

Act on any unusual or unexpected adverse events

Report any concerns to your healthcare provider or health authority.

Not all reported adverse events are caused by the vaccine

You can contribute to vaccine safety monitoring by reporting anything that you suspect might be related.

Continue to follow local COVID-19 recommendations

Even when vaccinated, social distancing, mask wearing and hand washing will continue to be important.
